

COVID SAFETY PLAN

Jan15- Feb 15 2022

If you're inside the building, wear a mask. (A 3-layer well-fitted mask please, a handkerchief isn't gonna cut it right now!)

The mask you wear has to be worn properly at all times, with a good seal around the edges and always covering both your mouth and nose if you are inside the building. (Unless you're in the middle of eating or drinking.)

Wipe down any high-touch surfaces at your station at the beginning of your shift.

If you're unwell at all, stay home and assess your symptoms on the bc.thrive.health/covid/en

Get a covid test if the BC Self-Assessment tool (bc.thrive.health/covid/en) recommends that you get tested.

If you get a positive covid test, stay home for 5 days (or longer if you still have symptoms) or as advised by public health. If you don't get a test, stay home until you no longer have symptoms/as advised by public health.

Use hand sanitizer when you arrive at work and wash your hands any time you touch your face, eat or use the bathroom.

Please give each other 2m of space.

If possible eat outside or alone.

Keep up with the recommended vaccine schedule.

Thanks everybody!!!
